#### Customer Problem Statement :

Banks and financial institutions process thousands of credit card applications every day, making manual approval slow, time-consuming, and prone to errors. Customers expect quick and accurate decisions, while banks need a reliable way to identify eligible and high-risk applicants.

The **Credit Card Approval Prediction System** uses machine learning to automate the approval process by analyzing applicant data and predicting approval or rejection in real time. This helps reduce processing time, improve accuracy, minimize risk, and enhance the overall customer experience.

|                     |                                                                                        |                                                                                                                                              |
|---------------------|----------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| I am                | Describe customer with 3-4 key characteristics - who are they?                         | Banks and financial institutions that receive a large number of credit card applications every day.                                          |
| I'm trying to       | List their actions or goals - what are they trying to achieve?                         | Approve the right credit card applicants quickly and accurately while minimizing risk.                                                       |
| but                 | Describe what problems or barriers stand in the way - what stops them now?             | The manual review process is time-consuming, requires many documents and is prone to human error.                                            |
| because             | Enter the "root cause" - why the problems or barriers exist - what needs to be solved? | Manual verification, complex eligibility checks, lack of real-time data analysis and multiple risk factors cause delays and inconsistencies. |
| which makes me feel | Describe the emotions from the customer's point of view - how does it impact them?     | Overwhelmed, pressured and concerned about making incorrect decisions that lead to financial losses and customer dissatisfaction.            |
